

Roberto Stancampiano

Born on 11/03/59 in Cagliari, he obtained the diploma of Chemical Expert at the Industrial Technical Institute for Chemists "M. Giua" in 1978; he graduated in Chemistry and Pharmaceutical Technologies at the University of Cagliari in 1988. He obtained the PhD in Neuroscience in 1994.

In the years 1995-2000 he attended the Institute of Human Physiology where he carried out research concerning the role of serotonin and the role of vitamin A in the modulation of various central functions in rodents. He has been a researcher in Physiology since 2001 at the Department of Biomedical Sciences at the University of Cagliari. Currently, his research activity is focused on the study of Parkinson's disease in pre-clinical models. In particular, the research focuses on the understanding of the mechanisms underlying the appearance of dyskinesias and the development of therapeutic strategies to counteract them, in order to prolong and optimize the effectiveness of levodopa treatment in Parkinson's patients. He is the author of about 60 articles in international journals.
